

Boiler Treatment Chemical Guide

Product	Form	Features
WT-6	Liquid	WT-6 is used for the prevention of scale and corrosion in steam boilers with hard water.
WT-7E	Liquid	WT-7E is used to prevent corrosion deterioration, such as grooving, of steam condensate systems.
WT-17	Liquid	WT-17 is a non-Chromated and non-phosphated water treatment compound specially formulated for use in boilers that use hard water.
WT-55	Liquid	WT-55 is a boiler water-condensate line treatment in one package. It conditions the boiler water and helps prevent corrosion in condensate lines in one treatment. WT-55 is designed to be used with hard water feeds.
WT-56	Liquid	WT-56 is a boiler water-condensate line treatment in one package. It conditions the boiler water and helps prevent corrosion in condensate lines in one treatment. WT-56 is designed to be used with soft water feed.

Cooling Tower Chemical Guide

WT-28	Liquid	WT-28 is a concentrated, alkaline, all organic water treatment for use in a cooling tower.
